ARREST**

MORE FEATURES

SurgeArrest easily converts a wall outlet into a 3 outlet surge suppressor.

Site-Wiring Fault Indicator

In order to work properly, surge suppressors require a correctly wired and grounded outlet. SurgeArrest's Site-Wiring Fault Indicator identifies dangerous wiring problems before you plug in your valuable equipment.

Protection Working Indicator

If this indicator ever goes out, it's a sign that the surge suppression circuitry has been damaged. APC will replace your SurgeArrest under its lifetime warranty.

THE BEST PROTECTION

Catastrophic Event Protection

A fast acting fuse reacts quickly to lightning strikes and other catastrophic surge events. A thermal fuse shuts your system down in the event of a dangerous wiring fault. This protection actually blocks power from reaching your equipment if the surge components are damaged.

NOTE: Most other surge suppressors continue to let power through even after their circuits have been damaged, leaving your equipment exposed to surges!

Multi-Stage Protection

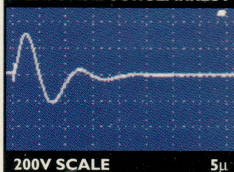

SurgeArrest has an advanced multi-stage design that combines the individual strengths of several components to provide the best possible protection. When subjected to the stringent UL 1449 test for surge suppressors, SurgeArrest exceeds the best possible rating.

Lab tests show Surge Arrest is the most effective protection.

SurgeArrest incorporates filters that track the sine wave and provide instantaneous response to surges.

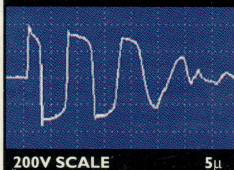

Notice how Personal SurgeArrest has the best suppression and clearly outperforms all same class competitors.
